QUALITY POLICY

Scatec is founded on a vision of *Improving Our Future* through new energy production around the world. Our activities are a commitment to our long-term ambition, with our Power Plants made to work reliably and efficiently over their entire lifecycle. Our mission as a company is to deliver competitive and sustainable renewable energy globally, to protect our environment and to improve quality of life through innovative integration of reliable technology.

This makes the need for quality in Scatec especially important - employees and involved partners must be informed about our quality objectives in Project Development, Delivery and Power Production, in addition to supporting functions. These quality objectives help us fulfill the commitments in our policy and provide the framework for indicators and targets in all operations.

We are committed to:

- Continually improve the service we provide to meet delivery requirements and to produce finished work that we can be proud of.
- Ensure that this policy and defined objectives are reflected in our work processes and that they comply with our general strategies.
- Continually improve the quality management system to enable us meet requirements and objectives.

Essential principles and elements:

- Fulfilling the quality objectives is not a single event but a continuous process.
- It is important that everyone is aware of quality objectives relevant to their daily work.
- We expect that our partners and suppliers deliver with a quality that meet our requirements.
- Establish partnerships with partners and interested parties to improve products and service.
- Perform quality control of both activities and equipment.
- Audit those controls when necessary.
- Engage, direct and support employees to get involved in improving our processes.

All information needed to achieve good quality is described in the Scatec Operating System. This system is improved and reviewed regularly (as is this policy).

CEO Terje Pilskog
